(54) Title: SYSTEM AND METHOD FOR BROADCASTING A VIDEO PROGRAM

(57) Abstract: The system for  
broadcasting a video program to  
several destinations (14) comprises  
an assembly of broadcasting sources  
(26) suitable for ensuring the  
transmission, on an information  
transmission network (16), of several  
video signals comprising the same  
video program and shifted with  
respect to time, and means (22)  
for controlling and managing the  
broadcasting sources (26). The  
means (22) for controlling and  
managing broadcasting sources (26)  
are adapted to ensure temporal shifts  
between the video signal supplied  
by the different sources (26), all of  
which are proportional to one and  
the same elementary shift interval (d).
